Stenomask - noise cancelling, voice isolation microphone

Talk Technologies revolutionary Stenomask microphones allow you to use speech recognition and verbally communicate in public without anyone overhearing you.

Recently we have seen a dramatic increase in people embracing this technology at work and in the classroom. Used in conjunction with speech recognition software it affords them the ability to work freely, anywhere, without having to worry about disturbing others or being overheard.

[Steno SR](#) is the only speech recognition microphone that provides complete voice privacy and noise cancellation. By isolating the users voice it enables you to privately transcribe and communicate while simultaneously eliminating all background noise thus ensuring a crystal clear voice signal. It is ideal for classroom settings, open offices, meetings, commuting, or anywhere you require voice privacy and noise cancellation. This assistive technology can be used with any speech recognition software including Dragon 15 and is compatible with all modern devices including smartphones, laptops, tablets and recorders.

Stenomask is currently used by

- Professionals that require privacy when speaking on the phone
- Workers in open space offices and public places
- Physicians and healthcare professionals using speech recognition software such as Dragon Medical, complies with HIPAA privacy and security rules
- Assistive technology for individuals with unique needs i.e., dysarthria, the inability to speak louder than a whisper or speaking too loudly
- Interpreters for simultaneous language translation
- Police, military and security personnel for communicating and transcribing privately
- Job trainers and supervisors in noisy work environments
- Speech recognition software users, or anyone that takes verbal notes i.e., students, scribes, insurance agents, appraisers, inspectors
- Court Stenographers for verbatim recording of court proceedings
